

TT210703 – FUP - Graphic Page Tips

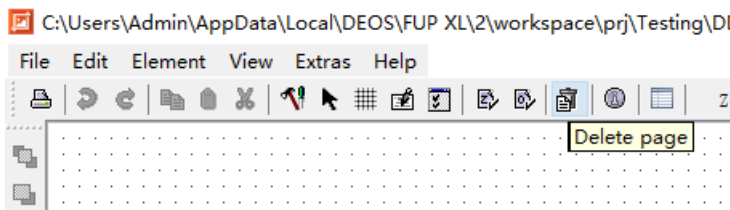

1. Let's start by creating a new graphic page. In FUP editor, click "Graphic", "New Page" from the menu.

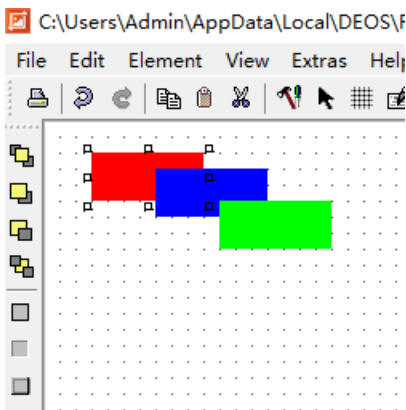

2. Type the page number (or just use the default) and click OK.

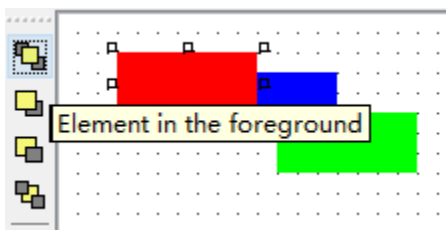

3. If you want to delete the graphic page, you can click the delete button .

4. Now let's add some color elements (or other graphic elements as you like) to the graphic page. You can see there are some buttons on the left .

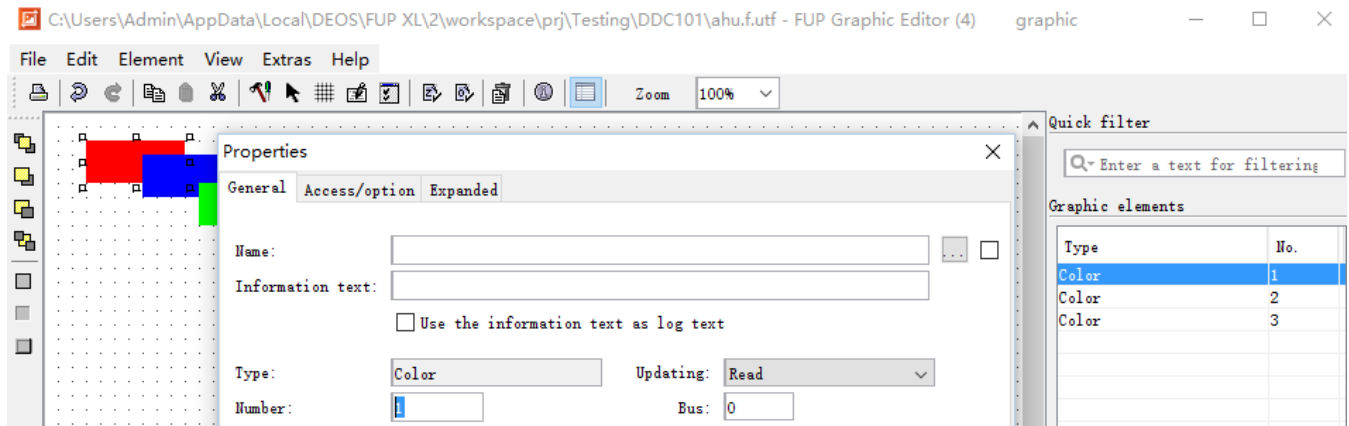

5. The first 4 buttons are the order of the graphic element, which means which one is at the bottom, or which one is on the top. For example, clicking the first button for the red color make it on top of all other colors.

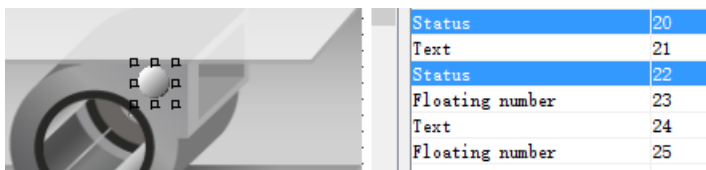

6. You can move it one layer up or down using the 2nd and 3rd button, and the 4th to the bottom.

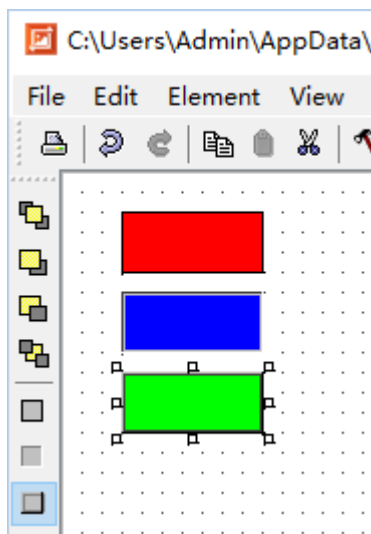

7. You can do the same from the “Properties” window (click  button). Change the “Number” to 3 to set the red color to the top.

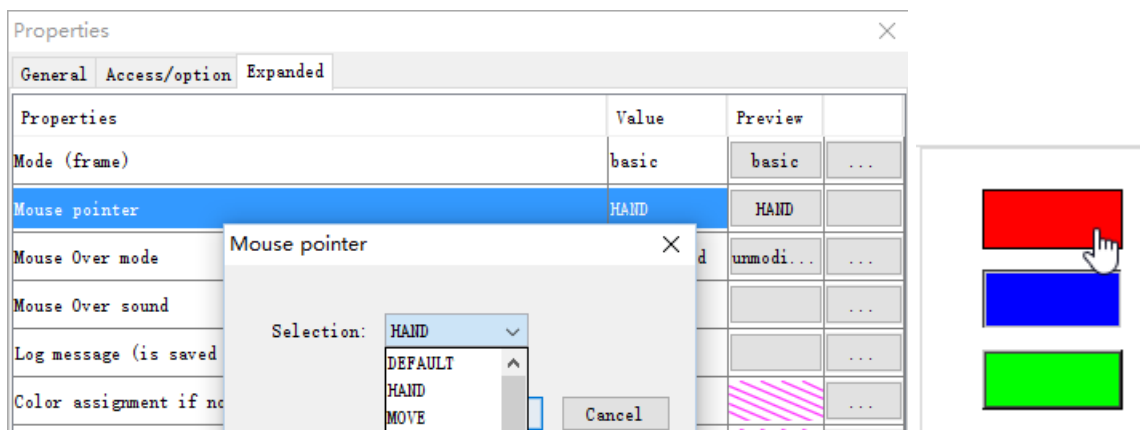

8. The “Properties” window also helps you if you’ve elements overlapped with others.

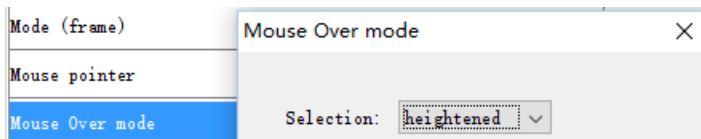

9. The next 3 buttons are to set the frame. The 1st is basic frame, the 2nd is “deepen” (like 3D), and the 3rd is “raised” (like a button).

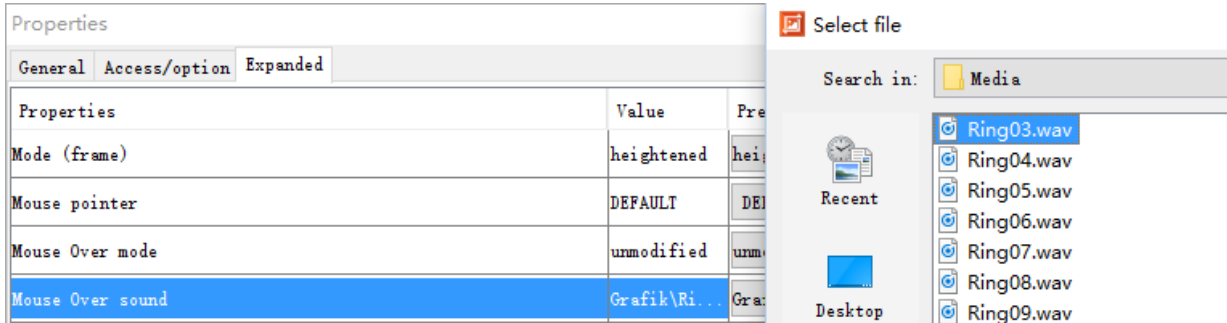

10. Now go and check the “Properties”. Click on “Expanded”, the first property is “Mode (frame)” which we’ve shown in (8). The 2nd property is “Mouse Pointer”. You can set it to “HAND’, and mouse pointer will change to hand when the mouse is pointing over it.

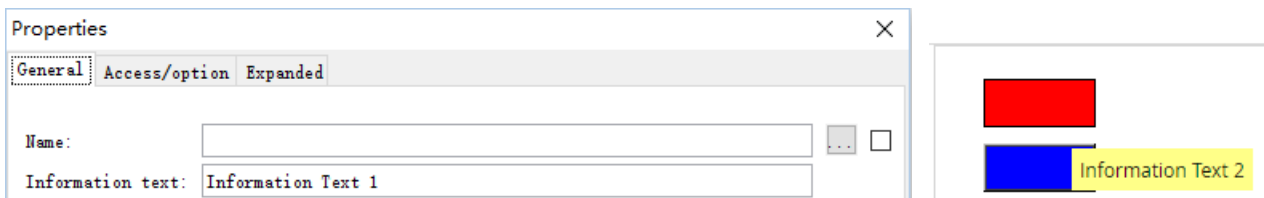

11. Next is "Mouse Over Mode". Changing it will see the button changed when mouse over.

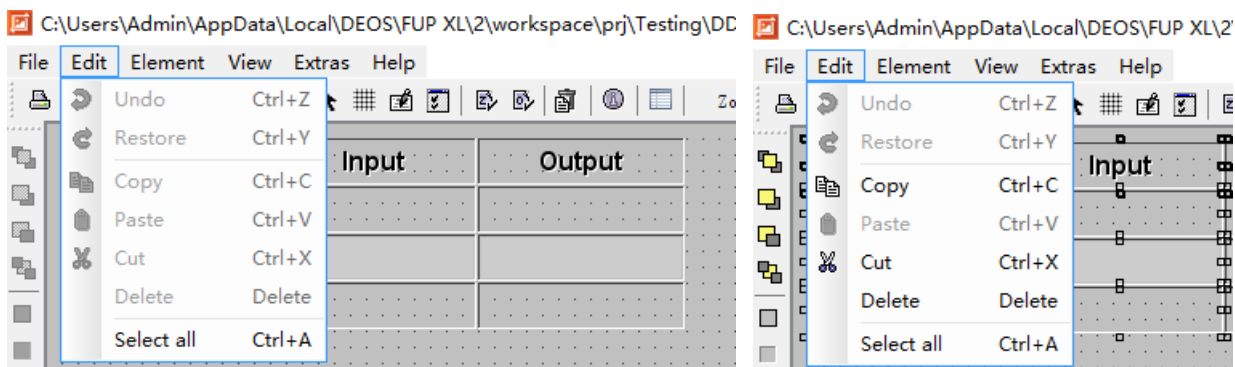

12. The 3rd one is "Mouse Over Sound". You can select a sound file to play when mouse over. Please note that this only works in OPENweb and OPENview Control Panel.

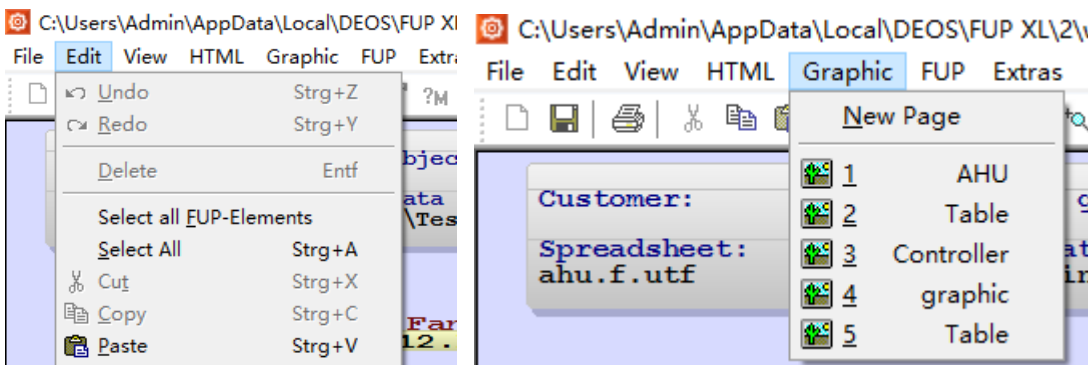

13. Go to "General", and you can see the "Information Text". The text will show in a popup dialog and you can use it to show more information about it (e.g. point description)

14. Lastly, we will show you how to copy the whole graphic page. Open a graphic page, click "Edit", "Select all". Then click "Edit", "Copy" to copy everything.

15. Close the graphic page and the FUP page (they must be closed first). Open the FUP page again (don't open graphic page). Click "Edit", "Paste". Now you can see a new graphic page was added with the same name.

16. This copy and paste allow you to copy the whole graphic page, together with the name, size, background color, and all others. You can also use it to copy the whole graphic page to other FUP page or controller as well.
