# TT210503 – FUP - Graphic Page Navigation

1. For graphic page navigation, we can use graphic element "DialogCall01" and link to different graphic pages in property 'Page Reference"

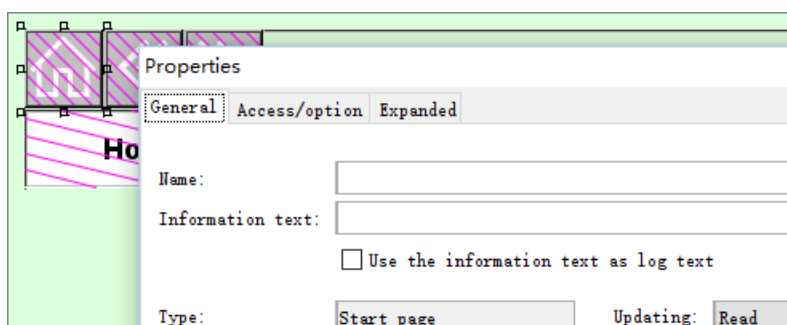

2. This creates the buttons that you can click and go to another graphic page. Please refer to TT190102 for details

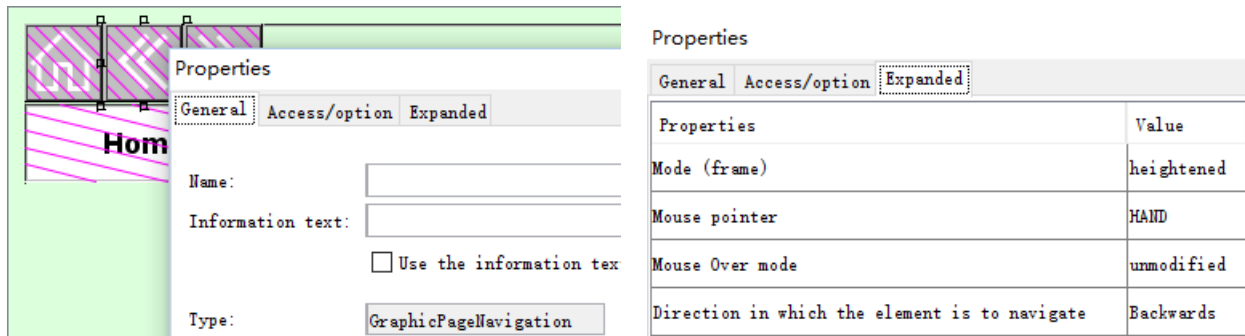

3. If you use OPENweb, then there are 2 graphic elements that you can use for graphic navigation. They are "Start Page" and "GraphicPageNavigation" under "Control Elements"

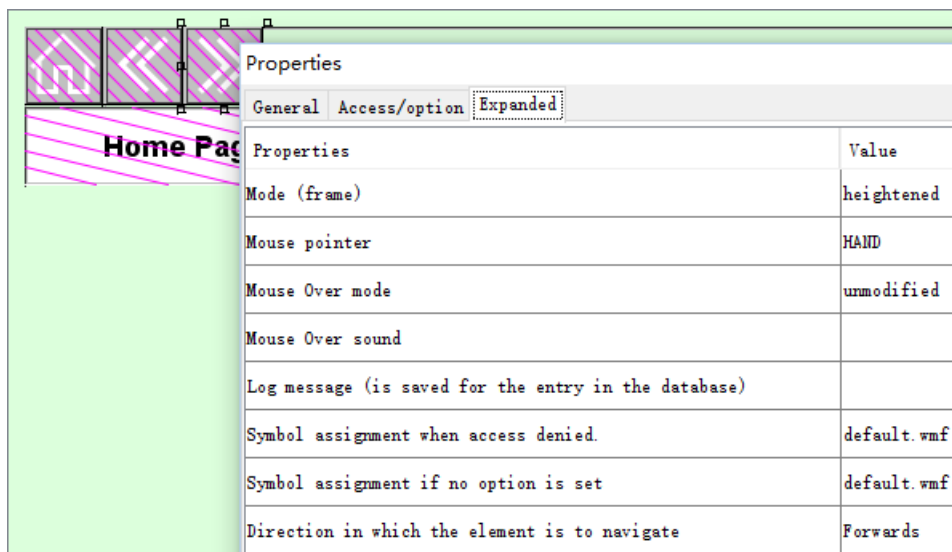

4. First, add the "Start Page" graphic element to your graphic pages

5. Then add the "GraphicPageNavigation", go to "Expanded" tab, set the "Direction in which the element is to navigate" to "Backwards"

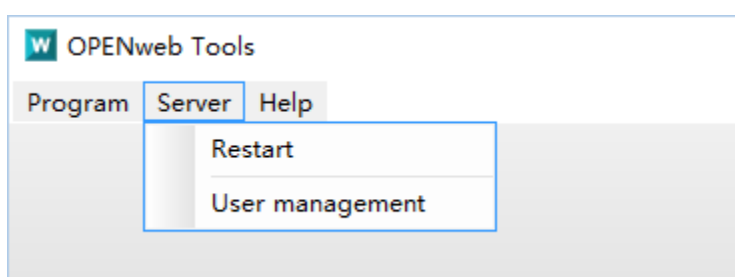

6. Add another "GraphicPageNavigation", set the "Direction" to "Forkwards"

7. Now start OPENweb Control Panel, click "Page 1" and then "Page 2", and then you can use the "Backward" and "Forward" buttons to go back and forth the pages

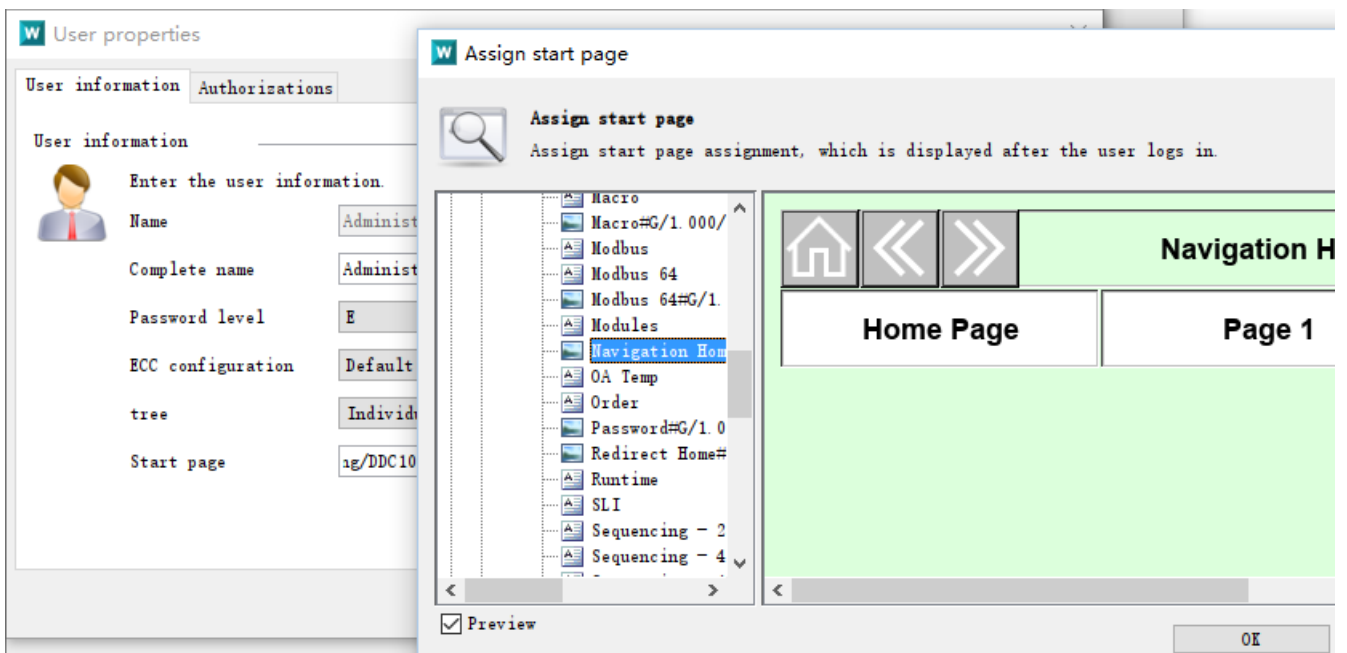

8. To make the "Start Page" button working in OPENweb, you have the set the start page for the user. From the menu, click "Extras", "Tools". In "OPENweb Tools", click "Server", "User Management"
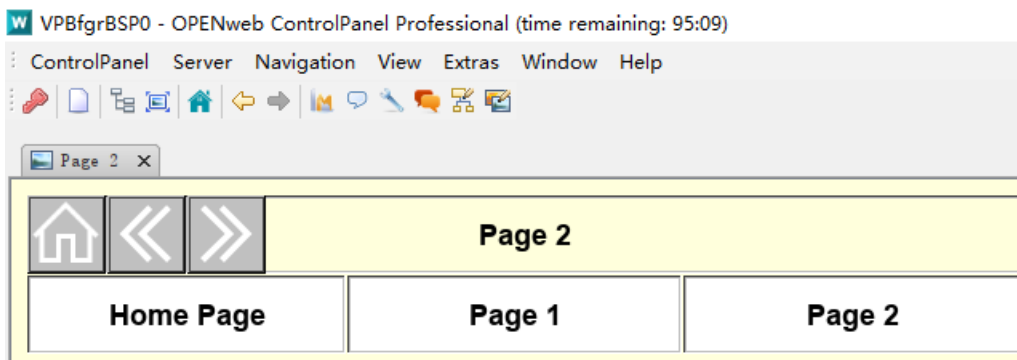

9. In "User Management", select the user, click the "Change User Properties" button 📑

10. In "User Properties", click the "Start Page" selection button ⋯, then select the start page

11. Logout and login OPENweb Control Panel. Now you can click "Forward" and "Backward" buttons to navigate the graphic pages, and the "Start Page" button to go back directly to the "Start Page"

12. Please note that the 2 buttons only work in OPENweb Control Panel. You can see these 2 buttons are the same functions as the one in the menu and the toolbar
